No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

Na+/K+-exchanging ATPase (EC 3.6.3.9) gamma chain - sheep (fragment)
N;Alternate names: sodium pump gamma chain; sodium/potassium-dependent ATPase gamma chain;
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Accession: A46435; S31524; A27383

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Mat-8, a novel phospholemman-like protein expressed in human breast tumors, induces a chloride conductance in Xenopus oocytes.", J. Biol. Chem. 270:2176-2182(1995).

-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus oocytes. May be a modulator capable of activating endogenous oocytes channels.

-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-!- TISSUE SPECIFICITY: Expressed in a subset of murine breast tumors.

-!- MISCELLANBOUS: Marker of a cell type preferentially transformed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=95138184; PubMed=7836447; DOI=10.1074/jbc.270.15.8571;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                                                                                     -:- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-:- TISSUE SPECIFICITY: Selectively present in the distal parts of the nephron (medullary and papillary collecting ducts and end portions of cortical collecting tubule) and in the epithelial cells of the distal colon. No expression is found in renal proximal tubule, loop of henle and distal tubule, proximal colon, small intestine, lung, choroid plexus, salivary glands, or brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Morrison B.W., Leder P.; "neu and ras initiate murine markers that share genetic markers

Sweadner K.J., Real B.;
"The FXYD gene family of small ion transport regulators or channels:
CDNA sequence, protein signature sequence, and expression.";
Genomics 68:41-56(2000).
-I-FUNCTION: Induces a hyperpolarization-activated chloride current
when expressed in Xenopus oocytes. May be a modulator capable of
activating endogenous oocyte channels.
-I-SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-I-SIMILARITY: Belongs to the FXYD family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cell Struct. Punct. 23:315-323(1998).
-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus ocytee. May be a modulator capable of activating endogenous ocyte channels.
-!- SUBCELULIAR LOCATION: Type I membrane protein (Potential).
-!- SIMILARITY: Belongs to the FXXD family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3; Gaps
